Preventing the flu?
Ask about shingles too!

SHINGRIX can be given at the same time as the unadjuvanted seasonal influenza vaccine. The vaccines should be given at different injection sites.

SHINGRIX helps protect against shingles in adults 50 years of age and older.

Protecting yourself against the flu is important. So is protecting yourself against shingles. Ask your doctor or pharmacist if SHINGRIX is right for you.

SHINGRIX

HERPES ZOSTER VACCINE (NON-LIVE
RECOMBINANT, AS01_B ADJUVANTED)

9/10 adults have the virus that causes shingles. As you age, your immune system declines, increasing your risk of the virus reactivating, leading to shingles.

In clinical trials, SHINGRIX **was shown to be over 90% effective** at preventing shingles in people 50 years of age and older.

SHINGRIX maintained protection for four years. The duration of protection beyond four years is currently under investigation. As with all vaccines, SHINGRIX may not fully protect all people who are vaccinated.

Visit SHINGRIX.ca

SHINGRIX is a vaccine that helps protect adults 50 years of age and older against shingles (herpes zoster). 100% protection cannot be guaranteed. SHINGRIX is not for prevention of chickenpox or for the treatment of herpes zoster (HZ) or postherpetic neuralgia (PHN). SHINGRIX should not be used if you are allergic to any ingredient in the vaccine. Very common adverse events (>10% of doses) reported in clinical trials were pain, redness, and swelling at the injection site, headache, stomach and digestive complaints, muscle pain, tiredness, chills, and fever. Most side effects were mild or moderate, lasting less than 3 days. Ask your healthcare professional if SHINGRIX is right for you. Full product information can be found at <http://gsk.ca/shingrix/en>. To report an adverse event, please call 1-800-387-7374.

The cost of SHINGRIX may be covered by your private insurance. Contact your insurance provider and give the DIN (drug identification number) below to find out.
