

Order Sets including patient education

Order Sets in Allscripts TouchWorks EHR provide simultaneous ordering of all necessary components associated with effective clinical care such as lab tests, x-rays, and medications. **Order Sets** are efficient for the provider and can lead to better care.

Order Sets can be used for immunizations to help ensure patients receive all appropriate recommended immunizations, complete the series for multi-dose immunizations, and receive the appropriate patient education information such as the Vaccine Information Statement (VIS) and information on why series completion is important.

Benefits of patient education as an Order Set component

Order Sets can help providers to remember to order all the necessary components of an immunization, including related patient education.

Consideration:

User privileges to create **Order Sets** may be limited to select users with specific security privileges or subject to practice business policies.

If you have further technical questions, consult your internal or external Electronic Health Record (EHR) support resources.

This guide provides a high-level overview of how to create an Order Set, complete with patient education, within Allscripts TouchWorks EHR. This overview is designed to provide guidance for you, your practice's EHR champion, or IT staff.

Please note that this guide was created based upon Allscripts TouchWorks EHR version 20.0. Screens and features may change as new software versions are released.

This guide is for informational purposes only and is not intended to replace detailed instructions provided to you by your internal or external EHR support resources. The information in this guide is subject to change without notice. GSK makes no claims or warranties about the applicability or appropriateness of this information.

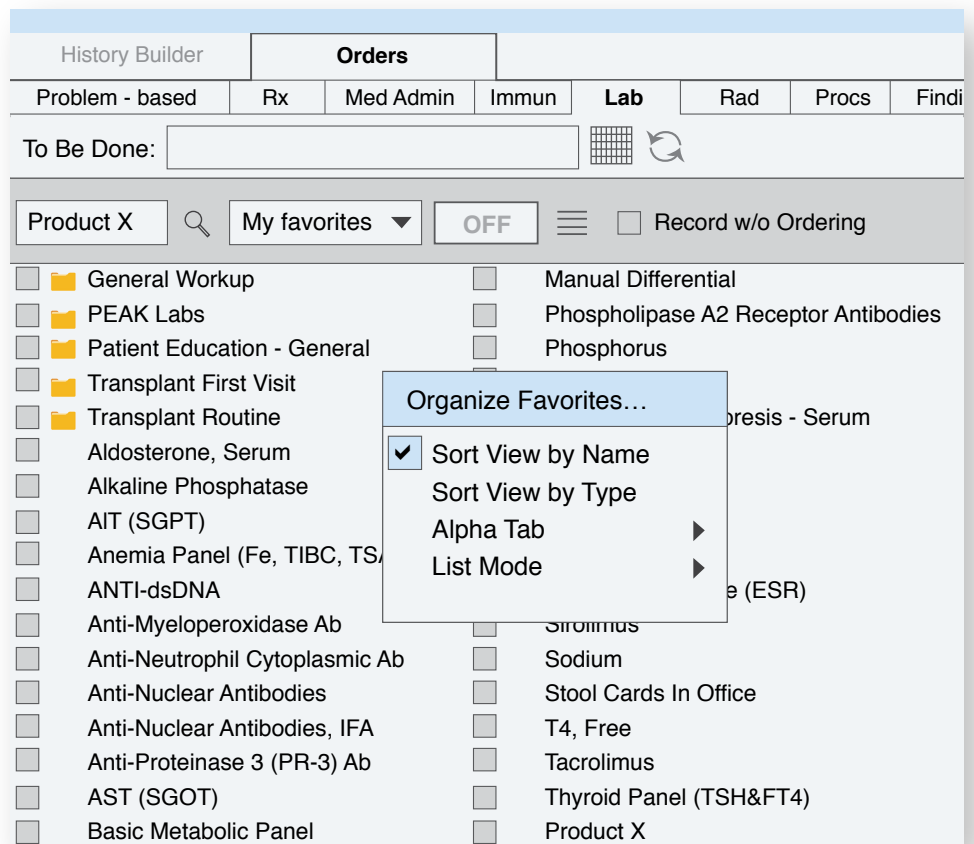

Order Sets for immunizations and patient education

In Allscripts TouchWorks EHR, anything that can be ordered is configured as an **Orderable Item**. From the **Orders** screen, all **Orderable Items** are available for selection. **Orderable Items** can be grouped together in folders as **Order Sets**.

For an immunization prescription to be ordered, there must be a prescription orderable item set up for **Product X**. The order must also be in the users **Favorites** list.

To add an immunization prescription to an Order Set

- Navigate to **Orders**
- Right click in the **Orders** section to display the **Organize Favorites...** menu
- Search for the appropriate immunization prescription, such as **Product X**
- Drag **Product X** into the appropriate **Order Set** folder; for example, **General Workup**
- To add an immunization to the **Order Set**, you will follow the same process as adding an immunization prescription to an **Order Set**

Creating Order Sets to include patient education in Allscripts TouchWorks EHR

To add patient education

Patient education cannot be added to an **Order Set**. However, all medications and immunizations have Allscripts-supplied patient education materials that can be printed from the **Encounter Summary**.
