

Updating immunization schedules in athenaClinicals EHR

Updating guideline measures in athenaClinicals EHR

Updating guideline measures to reflect GSK vaccines

The Centers for Disease Control and Prevention (CDC) publishes schedules for recommended vaccines appropriate to specific patients. The CDC schedule includes *universal recommendations*, meaning vaccines recommended for all patients of a certain age, and *risk-recommended vaccines* for those patients having certain conditions or specific health risks.

athenaClinicals EHR has guideline measures, which are maintained and periodically updated by athenaClinicals EHR. The guideline measures are generally based upon the CDC *universal vaccine recommendations*. Some GSK vaccines are *risk-recommended vaccines* by the CDC and may not appear in athenaClinicals EHR guideline measures.

Guideline measures provided by athenaClinicals EHR cannot be manually updated or edited by users. Users need to contact athenaClinicals EHR customer support and request that a GSK vaccine be added to the guideline measures.

Benefits of updating guideline measures

Providers decide which vaccines to routinely administer to their patients, so it is important for the guideline measures within the EHR to match the practice's vaccine protocol. This helps ensure that patients are identified and prescribed appropriate vaccinations, including GSK vaccines with a *risk-based recommendation*.

This guide provides a high-level overview on guideline measures within athenaClinicals EHR, to reflect GSK vaccines. This overview is designed to provide guidance for you, your practice's EHR champion, or IT staff.

Please note that this guide was created based upon athenaClinicals EHR version 19. Screens and features may change as new software versions are released.

The information in this guide is subject to change without notice. GSK makes no claims or warranties about the applicability or appropriateness of this information.

Updating immunization schedules in athenaClinicals EHR

Adding a vaccine to the guideline measures

The athenaClinicals EHR contains preconfigured guideline measures for some vaccines. These measures are not able to be added to or edited by practices.

Therefore, it is important to contact athenaClinicals EHR customer support to request to have a GSK vaccine added to the guideline measures. athenaClinicals EHR can then work with their development team to have the vaccine added.
