

Order Sets including patient education

Order Sets in athenaClinicals EHR provide simultaneous ordering of all necessary components associated with effective clinical care such as lab tests, x-rays, and medications. **Order Sets** are efficient for the provider and can lead to better care.

Order Sets can be used for immunizations to help ensure patients receive all appropriate recommended immunizations, complete the series for multi-dose immunizations, and receive the appropriate patient education information such as the Vaccine Information Statement (VIS) and information on why series completion is important.

Benefits of patient education as an Order Set component

Order Sets can help providers to remember to order all the necessary components of an immunization, including related patient education.

Consideration:

User privileges to create **Order Sets** may be limited to select users with specific security privileges or subject to practice business policies.

If you have further technical questions, consult your internal or external Electronic Health Record (EHR) support resources.

This guide provides a high-level overview of how to create an Order Set, complete with patient education, within athenaClinicals EHR. This overview is designed to provide guidance for you, your practice's EHR champion, or IT staff.

Please note that this guide was created based upon athenaClinicals EHR version 19. Screens and features may change as new software versions are released.

This guide is for informational purposes only and is not intended to replace detailed instructions provided to you by your internal or external EHR support resources. The information in this guide is subject to change without notice. GSK makes no claims or warranties about the applicability or appropriateness of this information.

Creating Order Sets to include patient education in athenaClinicals EHR

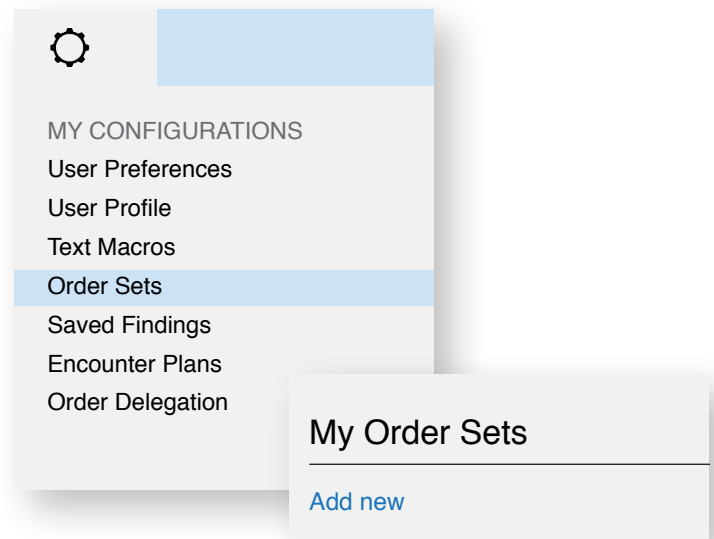

Order Sets for immunizations and patient education

athenaClinicals EHR provides tools that help enable practices to create **Order Sets**. **Order Sets** are a convenient way for users to quickly issue predefined groups of orders related to a specific diagnosis. **Order Sets** can be created or edited from **Settings**. They can also be modified “on the fly” during a patient visit.

To add an immunization prescription to an Order Set

- Select **Settings**, select **Order Sets**
- From **Manage My Order Sets**, select an **Order Set** to edit, or create a new **Order Set** by selecting **Add New**
- Name the **Order Set**, and select a **diagnosis**, if desired
- From **Diagnoses** and **Orders Detail**, select the **Vaccine** tab
- Search for and select **Product X**

Creating Order Sets to include patient education in athenaClinicals EHR

- In the next window, select **Prescribe**
- Add appropriate details for SIG, Qty, Units, and Notes to Pharmacy. All details will be saved with the prescription in the **Order Set**
- Choose **Add**
- The process for adding an immunization prescription to an **Order Set** is also the same for adding an immunization to be administered in the practice to an **Order Set**. Follow the same steps for both options

To add patient education

- To add patient education to the **Order Set**, select the **Patient Info** tab. Search for and select appropriate patient education materials for **Product X**
- Select **Add** to add the selected materials to the **Order Set**
