

## Updating immunization schedules in eClinicalWorks EHR

### Updating immunization schedules to reflect GSK vaccines

The Centers for Disease Control and Prevention (CDC) publishes schedules for recommended vaccines appropriate to specific patients. The CDC schedule includes *universal recommendations*, meaning vaccines recommended for all patients of a certain age, and *risk-recommended vaccines* for those patients having certain conditions or specific health risks.

eClinicalWorks EHR provides preconfigured immunization schedules for vaccines via the Immunization Calculation Engine (ICE), a licensed external database which is built into eClinicalWorks EHR. The immunization schedules are generally based upon the CDC *universal vaccine recommendations*. ICE also provides clinical decision support for immunizations. Some GSK vaccines are *risk-recommended vaccines* by the CDC and may not appear in the eClinicalWorks EHR vaccine schedules.

Immunization schedules provided by the ICE cannot be manually updated or edited by users. Users need to contact eClinicalWorks EHR customer support and request that a GSK vaccine be added to the immunization schedule.

### Benefits of updating immunization schedules

Providers decide which vaccines to routinely administer to their patients, so it is important for the immunization schedule within the EHR to match the practice's vaccine protocol. This helps ensure that patients are identified and prescribed appropriate vaccinations, including GSK vaccines with a *risk-based recommendation*.

*This guide provides a high-level overview of how to update the immunization schedule within eClinicalWorks EHR, to reflect GSK vaccines. This overview is designed to you provide guidance for you, your practice's EHR champion, or IT staff.*

*Please note that this guide was created based upon eClinicalWorks EHR version 11. Screens and features may change as new software versions are released.*

The information in this guide is subject to change without notice. GSK makes no claims or warranties about the applicability or appropriateness of this information.*

## Adding a vaccine to the immunization schedule

---

The immunization schedule in eClinicalWorks EHR is provided via ICE, and the schedule cannot be added to or edited by practices.

Therefore, it is important to contact eClinicalWorks EHR customer support to request to have a GSK vaccine added to the immunization schedules. eClinicalWorks EHR can then work with their external licensed database vendor to have the vaccine added.
